

- 1) When trying to run simulation the following error occur:
Class "<../>" not found -- perhaps its code was not linked in, or the class wasn't registered with Register_Class(), or in the case of modules and channels, with Define_Module()/Define_Channel().

Solution:

Make sure to run the simulation with the hnocs.exe and not with opp_run.

The screenshot shows the Oppanet simulation configuration dialog box. The 'Simulation' section is highlighted with a red box, indicating the executable path. The 'Executable' field is set to 'Other: /trunk/src/hnocs'. Other fields include 'Working directory', 'Ini file(s)', 'Config name', 'Run number', and 'Processes to run in parallel'. The 'Options' section includes 'User interface' (Default, Command line, Tcl/Tk, Other), 'Record Eventlog' (Default, Yes, No), and 'Debug on error' (Default, Yes, No). The 'Run' button is visible at the bottom right.
